

## PRESS RELEASE

# PDF Processing with PHP on IBM i5/iSeries

*PDFlib products can be deployed with PHP and Zend Server for IBM i*

**Munich, March 30, 2011.** PDFlib GmbH announces that all of its products can now be used with PHP on IBM i5/iSeries. While most PDFlib GmbH products already support PHP programming on many platforms and are also available on IBM i5/iSeries, the combination of PHP and i5 is new.

**Complete PDF processing.** For i5/iSeries there is now a complete and versatile set of PDF processing tools available which can be deployed with PHP. This covers PDF generation and composition with the PDFlib family of products, linearizing, optimizing, and encryption of PDF documents with PLOP, digital signatures with PLOP DS, text extraction from PDFs with TET, and PDF analysis with pCOS. For more details on PDF workflows with PDFlib GmbH products please see: [www.pdflib.com/products/](http://www.pdflib.com/products/)

**Powerful server environment.** PDFlib products for PHP on i5/iSeries run on Zend Server for IBM i. This is based on the Portable Application Solutions Environment (PASE for i), an »integrated runtime for porting selected applications from AIX systems«. PASE is not an emulation, but uses the processor directly. There are no performance disadvantages when using PASE. PASE is available without any additional charge and does not require users to learn AIX system administration since it is fully integrated into i5/OS.

More details about PASE can be found on the following site:

[www.pdflib.com/developer/technical-documentation/php-on-iserries](http://www.pdflib.com/developer/technical-documentation/php-on-iserries)

**Benefits of using PDFlib Software.** Tens of thousands of programmers worldwide are working with PDFlib software. PDFlib products meet all quality and performance requirements for server deployment. All products are suitable for robust 24x7 server deployment and unattended batch processing. The programming interface is straightforward and easy to learn. All international languages as well as Unicode are supported. PDFlib GmbH also offers commercial support to meet the requirements of business-critical applications.

**Availability and system requirements.** The products PDFlib, PDFlib+PDI, PDFlib Personalization Server, PLOP, PLOP DS, TET and pCOS are available for PHP on i5/iSeries immediately. The requirements for using PDFlib with PHP on i5/iSeries are Zend Server for IBM i, or Zend Server Community Edition (CE) for IBM i and PHP 5.2 or PHP 5.3.

In order to deploy PDFlib with Zend Server for IBM i a download package and license key for AIX is required. PDFlib GmbH products can be evaluated without a license, but some features are restricted unless a valid license key is applied. Please see [www.pdflib.com](http://www.pdflib.com) for pricing details or contact us at [sales@pdflib.com](mailto:sales@pdflib.com).

**About PDFlib GmbH.** PDFlib GmbH is completely focused on PDF technology. Customers worldwide use PDFlib products since 1997. The company closely follows development and market trends, such as ISO standards for PDF. PDFlib GmbH products are distributed all over the world with major markets in North America, Europe, and Japan.
