

1 Installing the TET Plugin

The TET Plugin works with Acrobat 7/8 Standard and Professional and Acrobat 9 Standard, Pro and Pro Extended. The plugin doesn't work with Adobe Reader.

Installing the TET Plugin for Acrobat 7/8/9 on Windows. The installer will copy the required files into a subdirectory of the Acrobat plugin directory. A typical location of the plugin folder looks as follows:

C:\Program Files\Adobe\Acrobat 9.0\Acrobat\plug_ins\PDFlib TET

This directory will contain the plugin file *TET.api*, the configuration files (**.tetoptions*), and manuals for TET and the TET Plugin. These files can also be copied to the appropriate directory manually.

Trouble-shooting. If the TET Plugin doesn't seem to work, make sure that in *Edit, Preferences, [General...], Startup* the box »Use only certified plug-ins« is unchecked. The plugin will not be loaded if Acrobat is running in Certified Mode.
